EDUCATION

Ontario Tech University

Bachelor of Engineering in Software Engineering

Oshawa, ON

Sep 2023 – 2028 (Expected)

- **Relevant Coursework:** Data Structures, Object-Oriented Programming & Design, Web Programming, Software Requirements Engineering, Data Management Systems (Databases), Design and Analysis of Algorithms, Software Design and Architectures, Introduction to Artificial Intelligence, Statistics & Probability for Engineers

TECHNICAL PROJECTS

Resumi | *React, Next.js, TypeScript, Node.js, Claude API*

June 2026 – Present

- Built a full-stack AI-powered web application with a React/Next.js frontend and 4 REST API endpoints (Node.js), guaranteeing type-safe AI output by using forced schema-constrained responses from Claude's API
- Cut a security vulnerability to zero by writing a single-pass input-escaping function that closed an injection gap in the document-generation pipeline
- Resolved multiple production race conditions by rewriting client-side state persistence to write synchronously ahead of React's render cycle, eliminating a navigation timing bug
- Built a zero-cost mock-mode testing harness to run full end-to-end QA on every user flow without incurring external API charges

MealApp | *React Native, Expo, TypeScript, Supabase (PostgreSQL), Google Gemini API*

May 2026 – Present

- Built a cross-platform mobile app in React Native/Expo targeting both Android and iOS from a single codebase, including a custom SVG-based chart component built from scratch
- Enforced strict per-user data isolation by designing a 17+ table PostgreSQL schema with Row-Level Security policies at the database level
- Cut transient-failure recovery time from 30–45 seconds to 1–2 seconds by redesigning an offline-sync retry scheduler to fire against the next real retry time instead of a fixed interval
- Delivered 8 AI-powered features (Google Gemini) using schema-constrained structured output, and built an ETL-style pipeline that cleaned and categorized 8,187 records across 41 paginated API requests

FraudWatch | *Java, REST API, Agile/Scrum, CI/CD*

Aug 2026

- Delivered a live fraud-pattern detection system as backend lead on a 3-person team by completing a genuine two-week Agile sprint with daily standups and a shared GitHub Projects board
- Built three rule-based detection algorithms to flag anomalous activity in a continuous data stream, exposing results via a documented REST API
- Kept three independently developed system components integrated cleanly by defining and maintaining the shared data contract between them
- Set up an automated CI pipeline (GitHub Actions) running the test suite on every push

Kudi Kitchen | *HTML, CSS, JavaScript (hand-coded), Stripe, Cloudflare Workers*

2026

- Replaced a Shopify storefront with a fully hand-coded, framework-free HTML/CSS/JavaScript site to gain full design and performance control
- Integrated Stripe payments, including a client-side Apple Pay/Google Pay button backed by a serverless Cloudflare Worker that independently re-verifies payment status before releasing the digital product
- Designed a defense-in-depth database access model with all application-role permissions explicitly revoked, so a single misconfiguration cannot expose customer data

Rate Limit Lab | *Python, pytest, matplotlib, Git*

Jul 2026 – Aug 2026

- Built and compared three backend rate-limiting algorithms from scratch, validated by a 16-test automated pytest suite covering functional behavior and edge cases
- Found and fixed a subtle timing bug through systematic root-cause debugging, documenting the investigation and fix as a written case study

MeetAlex Portfolio | *Next.js, React, Tailwind CSS, Vercel*

2025

- Designed and deployed a responsive personal portfolio site, optimizing for fast load times, SEO, and mobile responsiveness

EXPERIENCE

Software Engineer
Droady

- Contributed to Droady’s AI physique rating feature, integrating an AI/LLM model into a production mobile app that has grown to 113 active users since launch
- Contributed to payment integration using Stripe and RevenueCat for subscription billing on a live, revenue-generating product
- Worked across mobile, backend, and web development alongside a small engineering team, from active development through App Store launch

Nov 2025 – May 2026
San Francisco, CA

Founder & Digital Creator
Kudi Kitchen

- Increased checkout completion rates by 15–25% by analyzing conversion-tracking data and redesigning the checkout flow
- Independently own every stage of the product, from technical build to customer-facing content, in a fast-moving, resource-constrained environment

Mar 2025 – Present
Oshawa, ON

Wealth Manager (Client Services & Financial Planning)
Aegon

- Grew client portfolios by 12–18% average annual return by aligning investment strategy with each client’s individual risk profile and goals
- Maintained a 95% client retention rate by delivering consistent service, clear communication, and timely follow-ups

May 2025 – Aug 2026
Oshawa, ON

Operations & Client Engagement (Full-Time)
WesternBell International Ltd.

- Cut client response time by 50% by building and deploying the company website with an integrated live chat system
- Contributed to a 30% increase in new business by supporting client engagement, contract execution, and operational delivery

Jun 2024 – Jan 2025
Port Harcourt, Nigeria

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, Java, C++, HTML/CSS
Frontend: React, Next.js, React Native (Expo), Tailwind CSS, Responsive Design
Backend & Databases: Node.js, REST API Design, PostgreSQL, Supabase, Row-Level Security
AI & Data: LLM/AI API Integration, Structured Output Design, Data Pipelines, Prompt Engineering
Tools & Practices: Git, GitHub, Vercel, Cloudflare Workers, Agile/Scrum, Automated Testing, Technical Documentation
